CAREER OBJECTIVE

Final-year Diploma in Information and Communication Technology student specializing in Application Development. Actively exploring opportunities in software development and AI-assisted solutions. Seeking a Work-Integrated Learning (WIL) placement, internship, or graduate opportunity within a technology-driven organization where I can contribute to innovative software systems, apply my knowledge of Java, JavaScript, Python, Frameworks (Laravel, Spring Boot), databases, and AI technologies, and continue developing industry-level technical expertise.

EDUCATION

National Senior Certificate

Zwelakhe Senior Secondary School
2023 (Completed)

Diploma in ICT

Cape Peninsula University of Technology
2024-2026 (Final Year)

TECHNICAL SKILLS

LANGUAGES

Java · Intermediate Python · Intermediate
JavaScript · Intermediate

FRAMEWORKS

Laravel

DATABASES

SQL · Intermediate

AI & MODERN DEVELOPMENT

Prompt Engineering · Advanced
Vibe Coding (LLMs – GPT5 Nano)

SOFTWARE DESIGN & ARCHITECTURE

Domain-Driven Design Object-Oriented Design
Design Patterns Layered Architecture

TESTING

Unit Testing (JUnit) Test-Driven Development (TDD)

TOOLS & PLATFORMS

Git IntelliJ IDEA VS Code NetBeans Replit
Fuzen Lovable.ai

PROJECTS

ExamReady Hub

2026 – Present

Individual Project | Deployed Educational Web Platform

- Designed and developed a structured learning platform for Grade 8–12 learners.
- Built secure user registration to manage controlled access to academic resources.
- Implemented dynamic content structure for quizzes, exam papers, and memorandums.
- Applied AI prompt-assisted development to optimize system design and content generation.
- Designed responsive frontend interface and structured backend-ready architecture.

Mzansi ThriftShop

2025 – Present

Documentation Lead | Full-Stack E-commerce Application (Team of 5)

- Led technical documentation, including backend and frontend workflow design.
- Developers initially used dummy data for API communication; frontend was fully functional but not connected to the database.
- Currently improving database integration processes to ensure seamless communication between the database, backend, and frontend.
- Developed structured technical guides to assist the team in backend integration.

Course Enrollment System

2025 – Completed

Group Project | Student Course Enrollment System

- A Java-based course management system developed as a 2nd year group project, allowing administrators to manage students and modules, while students can enroll in available courses.
- Responsible for and mainly focused on the UI and the backend logic.
- Designed database queries for module registration and handling validation.
